

Corporate Cybersecurity & IT Training

DiTconsult provides corporate cybersecurity and IT training to help organizations strengthen employee awareness, develop technical skills, and support secure, effective use of technology. This document summarizes a **proposed curriculum framework**. **Courses can be scoped from foundational to expert**—not a claim that every area is available as a scheduled public course.

How to use this framework

Nineteen curriculum areas are grouped under six headings. We recommend starting with **12 proposed courses** and **four flagship workshops**, then expanding based on your priorities. Foundational employee training is labeled separately from advanced technical training. Prices, schedules, durations, and certifications or accreditation details are provided after you contact us.

Four flagship workshops

Workshop	Audience	Summary
Security Awareness & Social Engineering	All employees and contractors	Phishing, BEC, deepfake verification, authentication, and reporting.
Cloud Security Foundations	Cloud, platform, and security teams	Shared responsibility, misconfigurations, logging, and posture priorities.
Ransomware Readiness Tabletop	IT, security, and business leaders	Decision points, backup recovery, and crisis communication.
Responsible Workplace AI	Employees, managers, and policy owners	Approved tools, confidential data handling, verification, and governance.

12 proposed courses

1. **Cybersecurity Awareness and Social Engineering** — foundational employee awareness
2. **Identity and Access Management Essentials** — least privilege and Zero Trust-aligned practices
3. **Cloud Security Foundations** — AWS, Azure, and Google Cloud security foundations
4. **Vulnerability Management and Exposure Reduction** — risk-based prioritization and remediation
5. **Incident Response Fundamentals** — triage, evidence, containment, recovery
6. **Ransomware Readiness and Business Resilience** — scenarios, backups, and tabletop exercises
7. **Application, API, and DevSecOps Security** — secure design and pipeline controls
8. **Data Security and Information Protection** — classification, encryption, DLP
9. **AI in Cybersecurity and Security Automation** — AI-assisted analysis with human approval
10. **Securing Generative AI Applications and AI Agents** — prompt injection, data boundaries, agent permissions
11. **Responsible AI Use and AI Governance** — acceptable use and oversight
12. **Corporate IT, Microsoft 365, and Practical Automation** — workplace IT skills

Core Cybersecurity

1. Cybersecurity Awareness and Social Engineering **FOUNDATIONAL → EXPERT**

Audience: All employees, contractors, and business-system users.

Outcomes

- Recognize phishing, spear phishing, and BEC
- Apply deepfake verification procedures
- Use stronger authentication and report promptly

Topics

- Phishing, spear phishing, and BEC
- Deepfake impersonation and verification
- Passwords, passkeys, and MFA
- Secure remote work and incident reporting

2. Network and Endpoint Security **FOUNDATIONAL → EXPERT**

Audience: IT administrators and infrastructure security practitioners.

Outcomes

- Explain segmentation and secure remote access
- Apply Windows/Linux hardening concepts
- Connect EDR, patching, and protection workflows

Topics

- Segmentation, firewalls, secure remote access
- Windows and Linux hardening
- EDR fundamentals
- Patch management and endpoint protection

Labs typically required; further preparation recommended.

3. Identity and Access Management **FOUNDATIONAL → EXPERT**

Audience: Identity admins, IT/security teams, and access-control managers.

Outcomes

- Describe identity lifecycle and access reviews
- Apply least privilege and PAM concepts
- Discuss Zero Trust principles (NIST SP 800-207 aligned)

Topics

- Identity lifecycle and access reviews
- RBAC and least privilege
- Privileged access management
- Service accounts, workload identities, secrets
- Zero Trust principles and implementation

4. Cloud and Container Security **FOUNDATIONAL → EXPERT**

Audience: Cloud engineers, DevOps/platform, and cloud security practitioners.

Outcomes

- Apply shared responsibility and posture concepts
- Identify misconfiguration and logging gaps
- Discuss container/Kubernetes security fundamentals

Topics

- AWS, Azure, Google Cloud foundations
- Shared responsibility and misconfigurations
- Logging, posture, policy enforcement
- Container/Kubernetes security
- Infrastructure-as-code security

Container/Kubernetes labs may need extra environment preparation.

5. Vulnerability Management and Exposure Reduction **FOUNDATIONAL → EXPERT**

Audience: Vulnerability owners, IT operations, and security analysts.

Outcomes

- Connect inventories to assessment workflows
- Prioritize by business risk
- Plan remediation, tracking, and validation

Topics

- Asset discovery and inventories
- Scan interpretation
- Risk-based prioritization
- Remediation planning and validation
- External attack surface fundamentals

Security Operations and Resilience

6. Security Operations, SIEM, and Detection Engineering FOUNDATIONAL → EXPERT

Audience: SOC analysts and detection engineers.

- SIEM fundamentals, triage, detection logic, tuning, reporting

Specialist instructor, dedicated labs, and further preparation typically required.

7. Threat Intelligence and Threat Hunting FOUNDATIONAL → EXPERT

Audience: Threat analysts and SOC leads.

- Intelligence sources, IoCs, MITRE ATT&CK mapping, hypothesis-driven hunting, communicating findings

Specialist instructors and curated datasets typically required.

8. Incident Response and Digital Forensics Fundamentals FOUNDATIONAL → EXPERT

Audience: Incident responders and investigation-supporting teams.

- Preparation, triage, evidence preservation, endpoint/email/cloud investigation, containment/recovery, lessons learned

Specialist instruction and controlled lab evidence typically required.

9. Ransomware Readiness and Business Resilience FOUNDATIONAL → EXPERT

Audience: IT/security teams, continuity owners, and managers.

- Ransomware scenarios, backup restoration testing, BCDR, crisis communication, tabletop exercises

Application Security and Security Testing

10. Application, API, and DevSecOps Security FOUNDATIONAL → EXPERT

- Secure coding, API authZ/authN/validation, threat modeling, scanning, CI/CD and supply chain security

11. Ethical Hacking and Security Assessment FOUNDATIONAL → EXPERT

- Authorization and ROE, reconnaissance, controlled lab testing, business-impact documentation, remediation and retesting

Specialist instructors, written authorization context, and isolated labs required—never production without explicit scope.

12. Data Security and Information Protection FOUNDATIONAL → EXPERT

- Classification, encryption/key management fundamentals, DLP, retention/disposal, cloud data protection

AI and Cybersecurity

13. AI in Cybersecurity and Security Automation FOUNDATIONAL → EXPERT

- AI-assisted triage and prioritization with accuracy checks, human approval, audit trails, and rollback

14. Securing Generative AI Applications and AI Agents FOUNDATIONAL → EXPERT

- Prompt injection and untrusted content (OWASP LLM Top 10 themes), data disclosure, retrieval boundaries, tool/agent security

Specialist facilitation recommended for emerging AI application security topics.

15. Responsible AI Use and AI Governance FOUNDATIONAL → EXPERT

- Approved tools and shadow AI, confidential data handling, verification of AI-generated work, vendor review, oversight

Governance and Specialist Training

16. Cybersecurity Governance, Risk, and Compliance FOUNDATIONAL → EXPERT

- Policies and ownership, risk registers, framework mapping, third-party risk, audit readiness

17. Cybersecurity Leadership and Executive Decision-Making FOUNDATIONAL → EXPERT

- Business-language risk, investment priorities, board reporting, incident leadership, measuring progress

18. Operational Technology and IoT Security Fundamentals FOUNDATIONAL → EXPERT

- IT vs OT, visibility/segmentation, vendor access, safety/availability, isolated simulations

Specialist instructors and carefully isolated simulations typically required.

Corporate IT Training

19. Corporate IT, Microsoft 365, and Practical Automation FOUNDATIONAL → EXPERT

- Secure collaboration and file sharing, IT admin/troubleshooting, cloud fundamentals, PowerShell/Python, workflow automation
